

➤➤➤ **Service & Operating Manual (Pump Only)**

North America Office (Warren Rupp, Incorporated):

800 North Main Street Mansfield, Ohio 44902 | Tel: (419) 524-8388 | Email: info.cognitopump@idexcorp.com

Manufacturing Plant (IDEX India PVT LTD):

Survey No. 256, Near Bombardier Circle, GIDC Manjusr, Savli, Dist. Vadodara 391770, State Gujarat, India | Tel: 91-2667-662-001

⚠ WARNING**INSTALLATION IN HAZARDOUS DUTY APPLICATIONS:**

Pumps that will operate in environments defined as “hazardous locations” must only be installed, connected and set-up by qualified personnel with knowledge and understanding of protection classes, regulations and provisions for apparatus in hazardous areas, for the region where the pump will operate, because these regulations and provisions, along with the definition of what constitutes hazardous areas vary by location.

HAZARDOUS PRESSURE :

Can result in serious injury or property damage. Do not service or clean pump, hoses or dispensing valve while the system is pressurized. Disconnect and lockout / tagout power supply to electric motor and VFD. Relieve pressure from the system by opening dispensing valve or device and / or carefully and slowly loosening and removing outlet hose or piping from pump.

EXCESSIVE FLUID PRESSURE :

Fluid pressure developed by the pump should not exceed the maximum pressure as stated on the pump model plate. Be sure material hoses and other components are able to withstand fluid pressures developed by this pump. Check all hoses for damage or wear.

HAZARDOUS MATERIALS :

Safe handling practices must comply with local and national laws and safety code requirements. Obtain Material Safety Data Sheets on all materials from the supplier for proper handling instructions. Check before sending pump to factory. Do not attempt to return a pump to the factory or service center that contains hazardous material

EXPLOSION HAZARD:

Models containing aluminum wetted parts cannot be used with Methylene Chloride, 1-1-1 -Trichloroethane or other Halogenated Hydrocarbon solvents. These may react and explode. Check all wetted parts to assure compatibility before using with process fluid.

ELECTRIC SHOCK HAZARD :

Pump must be grounded. Improper grounding, setup, or usage of the system can cause electric shock. Turn off and remove power before servicing or installing equipment. Connect only to grounded power source. All electrical wiring must be done by a qualified electrician and comply with all local codes and regulations.

STATIC SPARK.

1. Sparks can ignite flammable material and vapors & can cause explosion resulting in severe injury or death.
2. The pumping system must be grounded when it is pumping, flushing, recirculating or spraying flammable materials.
3. Secure pump, connections and all contact points to avoid vibration and generation of contact or static spark.
4. Comply to local building codes and electrical codes for specific grounding requirements.
5. After grounding, periodically verify continuity of electrical path to ground. Test with an ohmmeter from each component (e.g., hoses, pump, clamps, container, spray gun, etc.) to ground to ensure continuity. Ohmmeter should show 0.1 ohms or less.
6. Submerge the outlet hose end, dispensing valve or device in the material being dispensed if possible. (Avoid free streaming of material being dispensed.)
7. Use proper ventilation.

When used for toxic or aggressive fluids, the pump should always be flushed prior to disassembly.

Before maintenance or repair, shut off the motor and bleed the pressure from the pump. Be certain that approved eye protection and protective clothing are worn at all times. Failure to follow these recommendations may result in serious injury.

⚠ CAUTION**CHEMICAL COMPATIBILITY :**

Check the chemical compatibility of the pump wetted parts and the substance being pumped, flushed or recirculated before using. Chemical compatibility may change with temperature and concentration of the chemical(s) within the substances being pumped, flushed or circulated. For specific fluid compatibility, consult the chemical manufacturer.

HOT SURFACE :

Precautions should be taken to restrict access to hot surfaces when needed. Metallic wetted sections can reach up to the same temperature as the fluid temperature (up to 100°C). Proper personal protective equipment (PPE) for hot surfaces should be worn. Check to ensure parts have cooled down sufficiently prior to any maintenance.

Do not use the pump for the structural support of the piping system. Ensure the system components are properly supported to prevent stress on the pump parts.

Ensure all operators of this equipment have been trained for safe working practices, understand it's limitations, and wear safety goggles / equipment when required.

Nonmetallic pumps and plastic components are not UV stabilized. Ultraviolet radiation can damage these parts and negatively affect material properties. Do not expose to UV light for extended periods of time.

Pressure relief valving or equivalent safeguards are required to prevent excess pressure on the discharge piping.

The pump is pressurized internally with pressure during operation. Make certain that all fasteners and piping connections are in good conditions and are reinstalled properly during reassembly.

Use safe practices when lifting.

⚠ IMPORTANT

Read the safety warnings and instructions in this manual before pump installation and start-up. Failure to comply with the recommendations stated in this manual could damage the pump and void factory warranty.

When the pump; is used for materials that tend to settle out or solidify, the pump should be flushed after each use to prevent damage. In freezing temperatures the pump should be completely drained between uses.

Torque all Fasteners before operation. Keep regular check. Creep of housing and gasket materials may cause fasteners to loosen. Torque all fasteners to ensure against fluid or air leakage.

Cognito is a brand of IDEX Corporation which is committed to offer highly engineered products and services to solve customer critical problems and to meet their future expectations.

Cognito pumps are Smart IoT capable Electrically Operated Double Diaphragm Pumps designed with a robust mechanism to satisfy every customer's demands for increased production efficiency & to lower total cost of ownership while facilitating smooth handling of variety of fluids & slurries. With proper attention to installation & maintenance, Cognito EODD pumps will give efficient and trouble-free operation.

Read the safety warnings & instructions in this manual before pump installation and start-up. One must strictly follow the IOM manual to avoid injury and hazards which may occur otherwise. Failure to comply with the recommendations stated in this manual could damage the pump and void factory warranty. In case any instruction in this manual is unclear or any information is missing, please contact customer service at Warren Rupp, Inc.

Read, Understand and Follow this information on to avoid injury and Property Damage / Pump Damage.

2.1 Lifting & Transportation

Follow below instructions to move the EODD pump to the required location:

1. The pump is provided with two lifting hooks as shown in Figure 1.
2. Lift the pump only from these two points
3. Lifting the pump from any other points may cause damage to the pump as well as injury to the person
4. While relocating the pump, make sure to decouple from the pipeline only after releasing the pressure & disconnecting the power supply.
5. Ensure adequate clearance around the pump for sufficient access and ventilation.

Figure 1

2.2 Storage

If the equipment is to be stored prior to installation, follow below instruction

1. EODD pumps should be flushed with the compatible media and should be stored in a dry & dust free location protected from impacts and vibrations. Storage temperature should be in between 15°C (59°F) to 35°C (95°F) & relative humidity below 70%.
2. Do not remove the protective covers from the pump before use.
3. In case of long-term storage, consult customer service

2.3 Unpacking

After you unpack the pump, and before you use it for the first time, follow below instruction

1. Check if the information on the nameplate correspond to the ordered pump configuration.
2. Make sure all parts and accessories listed on the packing list are as per the ordering.
3. Check for any damage which may be caused by inappropriate handling during shipment.
4. Immediately report out any damage or material shortage to the transport company and to the manufacturer.

Before pump operation, inspect all gaskets and fasteners for any looseness caused due to gasket creep. Re-torque loose fasteners to prevent leakage.

2.4 Health & Safety

The pumps are designed to handle different applications. Do not use the pump on the application / media different from that for which it was ordered without consulting the manufacturer.

The pumps are tested with water at our facility. If your pumped product has the chances to react with water, please make sure the pump is completely dry before operation.

2.5 Qualification of personnel

The personnel in charge of the installation, commissioning and maintenance of the EODD pumps should be qualified, experienced and authorized personnel. The safety of people, animals and property must be ensured while handling these pumps.

2.6 Chemical hazard

Verify the chemical compatibility of the pump wetted parts and the substance being pumped, flushed or recirculated. For specific fluid compatibility, consult customer service. Whenever the pump is to be used for pumping a different fluid, it is essential to clean the pump beforehand in order to avoid any possible reaction between the two products.

When used for toxic or aggressive fluids, the pump should always be flushed prior to disassembly. User must ensure chemical compatibility, and any pressure / temperature limits are not exceeded. If pump is not used for long period, care must be taken when restarting. If in any doubt, remove pump from line and flush with a suitable cleaner. Solidified deposits within the pump may cause damage to the diaphragms.

2.7 Electric hazard

Do not carry out any maintenance or/and operation on the pump while it is in operation. Check the specification of power supply before operation.

2.8 Temperature hazard

While operating the pump, the mechanical parts and the gear-motor surface temperature should not exceed nominal working temperatures stated by the gear-motor manufacturer.

2.9 Grounding the pump

Take action to prevent static sparking. Fire or explosion can result, especially when handling flammable liquids. Make sure pump is grounded by connecting the earthing wire to the motor housing.

2.10 Safety during maintenance or repair

Before maintenance or repair, switch off the power. Shut off the compressed air lined, bleed all pressure, and disconnect the air line to the dampener. Wear protective clothing and safety goggles when operating and /or working in the vicinity of Cognito Pump. Failure to follow these recommendations may result in serious injury.

2.11 Spare parts replacement

The use of non-OEM replacement parts will void agency certifications and warranty clause. We recommend to use only OEM replacement parts

3.1 Operating Principle

Cognito Electrically Operated Double Diaphragm pumps are highly engineered Pumps designed for various industrial application considering energy efficiency, safety, reliability, easy to use, maintenance friendly & long-lasting life.

The pump is driven by an electric motor with a reduction gearbox. This in turn drives an eccentric shaft to operate the Diaphragms. When the eccentric shaft rotates and reaches peak on one side, example right side of the chamber, at the same time left side of the chamber reaches valley. This causes extrusion of right diaphragm and intrusion of left diaphragm. As a result positive pressure is built on right side (green) and vacuum on the left side (blue).

Figure 2: Working Mechanism

Cognito EODD	4" (101mm)	3" (76mm)	2" (50mm)
Operation	Electric		
Maximum Flow Rate: GPM (LPM)	211 (800)	135 (510)	79 (300)
Maximum Operating Pressure: PSI (BAR)	87 (6)	116 (8)**	116 (8)
Materials of Construction	Aluminum or Stainless Steel		
Pump Body	Aluminum or Stainless Steel		
Diaphragm & Check Ball	Neoprene#, Santoprene, or PTFE		
Maximum Suction Lift: FT (M)*	26' (8) Wet	26' (8) Wet	26' (8) Wet
	18' (5.5) Dry	16' (5.1) Dry	13.5' (4.1) Dry
Solids Handling: IN (MM)	.35" (9mm)	.27" (7mm)	.19" (5mm)
Motor & Gear Box: HP	10hp	7.5hp	5hp
Sound Level	<80 db		
Displacement Per Stroke: GAL (L)	1.25 (4.75)	.76 (2.9)	.39 (1.48)

* Applicable for Santoprene & PTFE Diaphragm only. ** with reduced stroke length, consult customer service. # Not available for 2" pump.

Maximum Temperature Limits	Min.	Max.
Ambient Temperature	-20°C (-4°F)	55°C (131°F)
Process Fluid Temperature	-10°C (-14°F)	120°C (248°F)
Fluid Temperature should be further limited for the following material of Diaphragm used in the wetted sections:		
Neoprene	-10°C (-14°F)	77°C (170°F)
Santoprene	-10°C (-14°F)	92°C (197°F)
PTFE	-10°C (-14°F)	120°C (248°F)

Warning

1. Maximum fluid temperature as specified in above table should never be exceeded to maintain hazardous area surface temperature nameplate rating.
2. Do not allow fluids to freeze inside the pump.

Note: Santoprene® is a registered trademark of Celanese

3.2 Motor

3.2.1 Recommended IEC AC Motor Specification

Type	3Phase AC Induction Motor
Rating	5 hp (3.7 kW) 7.5 hp (5.5 kW) 10 hp (7.5 kW)
Pole	4 POLE
RPM	~1450 at 50 Hz or ~1750 at 60 Hz
EFF Level	IE3
Frame Size	IEC 112M (5 hp) IEC 132S (7.5 hp) IEC 132M (10 hp)
Drive	VFD (Inverter) capable recommend
Power Supply	>200 V, 3 Phase, 50 or 60 Hz
Motor Enclosure	TEFC or as the motor manufacturer recommends per application
Application Area	SAFE (Non-Hazardous Environments)
Type of Protection	IP55
Temperature	Amb 50 °C
Insulation Class	F
Mounting	Flange or Face (must match Gearbox interface)
TB Position	AS PER MFG. STANDARD
Lifting	2X Lifting Eye Casted or Fitted

3.2.2 Recommended NEMA AC Motor Specification

Type	3Phase AC Induction Motor
Rating	5 hp (3.7 kW) 7.5 hp (5.5 kW) 10 hp (7.5 kW)
Pole	4 POLE
RPM	~1450 at 50 Hz or ~1750 at 60 Hz
EFF Level	NEMA Premium or IE3
Frame Size	NEMA 184T (5 hp) NEMA 213T (7.5 hp) NEMA 215T (10 hp)
Drive	VFD (Inverter) capable recommend
Power Supply	>200 V, 3 Phase, 50 or 60 Hz
Motor Enclosure	TEFC or as the motor manufacturer recommends per application
Application Area	SAFE (Non-Hazardous Environments)
Type of Protection	IP55
Temperature	Amb 50 °C
Insulation Class	F
Mounting	Flange or Face (must match Gearbox interface)
TB Position	AS PER MFG. STANDARD
Lifting	2X Lifting Eye Casted or Fitted

Consult motor manufacturer for recommendations with AC motor specifications in hazardous environments (explosive or fire) or DC motor specification per the end user application.

3.3 Gearbox & Shaft Couplings

Recommended Gearbox Specification	
Type	Inline Helical Bevel Helical
Rating	5 hp (3.7 kW) 7.5 hp (5.5 kW) 10 hp (7.5 kW)
Output Shaft Mounting	Single Solid Shaft B5 Flange Mounted
Input Configuration	Metric IEC Motor Ready Input
Motor Mounting	Flange or Face (must match AC Motor)
Motor Mount at Gearbox (5 7.5 10 hp)	IEC 112M or NEMA 184T IEC 132S or NEMA 213T IEC 132M or NEMA 215T
Drain Plug Position	Bottom of Body
Filling Plug Position	Top of Body
Oil Grade	ISO VG 320 Mineral Oil
Service Factor	1.5 minimum (reciprocating pump loading)
Minimum Torque Capacity Rating	560 Nm (2" pump) 900 Nm (3" pump) 1550 Nm (4" pump)

All Dimensions in Millimeters

3.4 Cognito Pulsation Dampener

Pulsation Dampener plays a very important role in Positive Displacement Pumps to reduce pulsations & vibrations during pump operation, thus ensuring continuous & precise non-pulsed flow rate.

Cognito Dampeners are designed to provide vibration free smooth continuous flow that makes this component a suitable equipment for safeguarding the system.

It maintains a constant volume of air support at diaphragm by automatically adjusting to the current pressure and thereby absorbing the pulse.

Working Principle

A pulsation dampener uses a flexible diaphragm to separate a liquid chamber from a compressed air chamber. A rod connected to the center of the diaphragm activates the air inlet and exhaust which automatically admits or exhausts air to the air chamber. This maintains the diaphragms in mid-range of stroke to eliminate flow pulsation & pressure spikes.

Cognito Dampeners are suitable for EODD pump models and are available in Aluminum and Stainless-steel wetted housings.

Recommended Air Inlet Pressure : 1 bar higher from the Discharge Pressure

COGNITO DAMPENER PERFORMANCE: Dampening 90+% for all the sizes

Technical Specs				Available Wetted Materials

Consult the product manual for more information.

3.5 Performance Curve

Cognito 2" EODD Pump

Notes :

1. Use 5 hp / 3.7 kW motor with VFD
2. For SPM 161 & 149, contact Warren Rupp
3. The performance curve is based on following: SANTOPRENE elastomer fitted pump, flooded suction, water at ambient conditions 25°C, with COGNITO Dampener
4. The performance result may deviate in excess of 5% based on elastomer.
5. Performance vary based on Viscosity
6. NPSH-R curve at 6 bar Max. discharge condition

Cognito 3" EODD Pump

Notes :

1. Use 7.5 hp / 5.5 kW motor with VFD
2. For SPM 152 & 133, contact Warren Rupp
3. The performance curve is based on following: SANTOPRENE elastomer fitted pump, flooded suction, water at ambient conditions 25°C, with COGNITO Dampener
4. The performance result may deviate in excess of 5% based on elastomer.
5. Performance vary based on Viscosity
6. NPSH-R curve @6bar Max. discharge condition

Cognito 4" EODD Pump

Notes :

1. Use 10 hp / 7.5 kW motor with VFD
2. For SPM 130 & 114, contact Warren Rupp
3. The performance curve is based on following: SANTOPRENE elastomer fitted pump, flooded suction, water at ambient conditions 25°C, with COGNITO Dampener
4. The performance result may deviate in excess of 5% based on elastomer.
5. Performance vary based on Viscosity
6. NPSH-R curve @6bar Max. discharge condition

Santoprene	Red
PTFE	White

The variable frequency drive is recommend but it is permissible to use a soft starter instead with the proper gearbox reduction ratio selected for the desired output speed. The VFD will need separately sourced by the end user as this is currently not available with the pump. If equipped, it is recommended to use the Over Torque Detection Level setting at slightly above the rated pump pressure. Other settings may need adjusted to run the pump. The two leak sensors can either be wired into the VFD or PLC to trip a fault.

The below configuration chart are recommended settings to use in the Delta brand VFD model MS300. Parameter code and descriptions may very so it is recommend to consult the VFD manufacturer.

Parameter	Parameter Description	Set Value	Operation
00-02	Parameter Reset	9	Reset All Parameter to 50Hz
00-20	Frequency Command	2	External Analog Reference
00-21	Operation Command	1	External Terminals
01-12	Acceleration Time	120	Modified Setting (120)
01-13	De-acceleration Time	10	Modified Setting (10)
02-00	Operation Control	2	M1-Run & MI3-Stop (Modified Setting-1)
02-04	Multifunction IP (MI4) Command	18	Force to Stop
02-05	Multifunction IP (MI5) Command	40	Force to Stop
02-12	Multifunction IP Selection	0	24 For NC Contact Mi4 & 5 (Modified Setting-0)
02-13	Multifunction OP 1	1	Indication During Run
02-35	External Operation Control Selection After Reset & Reboot	1	Drive Run If the Run Command Remain After Reset or Reboot
06-06	Over Torque Detection Selection	4	Stop After Over Torque Detection
06-07	Over Torque Detection Level	90	For 6 Bar=90%
06-08	Over Torque Detection Time	0.1	0.1 - 60.0 Secs
07-20	Emergency Stop Selection	5	System Deceleration
09-00	Communication Address	1	Device Address
09-01	Comn. Transmission Speed	9.6	9600 kbps
09-04	Comn. Protocol	12	8, N, 1 RTU

7.1 Leak Detection Sensor Assembly: Safe Area Application (Non-hazardous Location)

1. There are 2 leak detectors (one for left diaphragm and another for right diaphragm) which come with 5 meters (16.4 ft) of cable. The 2 wire leads are color coded: red is positive and black is negative.
2. The leak detection sensors are 24 V analog type. The signal is normally open (NO) but when the leaked fluid creates continuity, it will close the circuit. If the process fluid is non-conductive, a different sensor will need incorporated such as a float switch.
3. When the process fluid, which the pump was pumping, leaks onto the sensor via a diaphragm failure, it completes the electrical circuit. The two wires of the sensor should be connected to the input terminals of the PLC or VFD. 24V will need applied to the non-hazardous rated sensor, and minimum amperage ($< 4\text{mA}$) will be required to detect a leak. The PLC or VFD should be programmed so that when the 2 wire circuit is completed, a fault is triggered. This fault can further trigger the pump to ramp down to a stop or send an alert of a leak for example.

7.2 Leak Detection Sensor Assembly: Hazardous Area Application (ATEX / IECEx)

1. There are 2 leak detection sensors that are used per pump which come with hermetically Sealed specified cable length.
2. Both Leak detection sensors need to connect with Hazardous area specified Terminal box
3. Terminal box connected with Barrier Switch Amplifier which is fitted in VFD Panel which is Placed in Safe Area through Armour cable.
4. All connections Should be wired as shown by the schematic below by a qualified and certified electrician according to any local and national electric codes.

8.1 Pump Components

Serial	Details	Serial	Details
1	Pump	5	Leak Detection Sensor Cable(optional)
2	Dampener (optional)	6	Motor Wire (reference only)
3	Suction Flange	7	Filter and Regulator (reference only)
4	Discharge Flange	8	Control Panel (reference only)

8.2 Installation Guidelines

1. Locate the pump as close as to the product being pumped if possible.
2. Make sure to have leveled foundation floor.
3. Drill the holes for Anchor fasteners.
4. Clean & install the anchor fastener bolts on the previously drilled holes.
5. Position the pump and align the holes on pump to the holes made on the floor.
6. Fasten the anchor fastener nuts and secure the pump.
7. Connect the suction port (Inlet) & discharge port (Outlet) with the expansion rubber bellows.
8. Fix the Control Panel on the wall as per Control Panel installation guideline (Not Included).
9. Avoid any tight bends or drastic reduction in the pipeline.
10. Connect the sensor wires from the pump to the corresponding port on the VFD or PLC.
11. Connect the motor wire to the Control Panel.
12. Connect Pneumatic Air Supply to Filter & Regulator unit of Dampener.
13. Connect the main Power Supply to the Control Panel. Do not start pump, yet! Go through the Pre-start Procedure and check list mentioned in the manual, before starting the pump.
14. Inspect for any sign of leakages, If found, tighten the fittings and fasteners as per the recommended torque. If leakage still persists, contact customer service. Torque details are mentioned after startup procedure.
15. It is recommended to install a pressure gauge and pressure relief valve.

8.3 Prerequisite Before Starting Pump Operation

1. Ensure 3-phase Power Supply provided to the Control Panel is from reliable source and it matches voltage and frequency of VFD drive and motor.
2. All cables inside the Control Panel should be connected with proper lugging. Ensure all cables are gently fastened and cable glands are firmly tightened.
3. Ensure all foundation bolts are firmly tightened.
4. Ensure Panel is fixed properly using support and verify connections as per wiring diagram before starting the pump.
5. Ensure proper grounding of the motor.
6. Check & ensure if the speed control knob is in the minimum position.
7. Rotary switch in Control Panel is available to RUN the pump either in AUTO / MANUAL mode. If switch is in the MANUAL mode, manual START is required to start the Pump.
8. Ensure pump suction valve and discharge valve is fully open before starting the pump and required air is lined up to the dampener.

Wet-chamber Outer Bolts	M12	50 Nm / 443 in-lb
Manifold & Elbow Outer Bolts	M12	50 Nm / 443 in-lb

8.5 Grounding & Pump Earthing

8.5.1 Pump Earthing

1. All pumps have a ground screw installed in pump support bracket.
2. Protective paint is applied to prevent rust
3. Size of grounding screw is M8
4. Connect one end of the grounding wire to ground screw and other end of the grounding wire to suitable earth ground.
5. Keep grounding wire connection distance as short as possible
6. The cross section of grounding wire must be at least sized according to local, state, and federal requirements.
7. Make sure earthing cable connection should be properly tightened with cable lug
8. Check the local electrical code for detailed grounding instruction & the type of equipment required.

8.5.2 Motor Grounding

⚠ WARNING

1. It is compulsory to earth the motor. Earthing must be performed in accordance with current regulations (protection of workers).
2. Motors have a ground screw inside the terminal box. Use it to ground the motor
3. The cross section of grounding wire must be at least sized according to local, state, and federal requirements.

Trouble	Possible Cause	Remedy
Pump not starting	No power	Check & Correct Input power in all phases
	Disconnected wires	Check the wiring as per wiring schematic
	Diaphragm rupture	Check for error light of diaphragm failure, replace diaphragm
	Motor failure	Check the display for error code
Low flow	Incorrect rpm	Check and correct the rpm
	Incorrect opening of suction & discharge valve	Check & open valve as per our recommended opening
	Pump jammed with media	Clean & flush all pumping media path
	Stuck ball valves	Clean & flush valve
	Improper input power	Check for input power as per specs (Hz & voltage)
	Abnormal slurry or very high viscosity	Check viscosity
High flow	Incorrect rpm	Check and correct the rpm
	Improper input power	Check for input power as per specs (Hz & voltage)
	Low viscosity of pumping media	Check viscosity
No flow	No power	Check power supply in all phase & correct it
	Valve closed	Check the valves
	No pumping media in sump	Check & fill sump
	Stuck ball valves	Clean & flush valve
	Diaphragm rupture	Check for error light of diaphragm failure, replace
	Broken spider coupling	Check and replace spider coupling
	Motor failure	Check the display for error code
	Pump jammed with media	Clean & flush all pumping media path
Tripping	Incorrect line voltage	Check and correct line voltage
	Diaphragm rupture	Check for error light of diaphragm failure, replace
	Overheating of motor	Check rated duty of motor cycle
		Check cooling fan damage
		Check incorrect line voltage
Check stuck gearbox		
Noise	Inadequate Air pressure	Check for dampener setting
	Loose bolts	Check for loose bolt and tighten them
	Coupling wear	Check for spider wear
	Incorrect line voltage	Check for line voltage
Panel not starting	No power	Check power supply in all phase & correct it
	Disconnected wires	Check the wiring as per wiring schematic

Sr. no	Maintenance Item	Frequency	Indication
1	Diaphragms	As needed	Pump will be shut down by the VFD due to fluid detection by leak detection sensors installed in each of the Diaphragm.
2	Balls	As needed	Behavior, excessive pulsation, reduction in flow; visual inspection
3	Seats	As needed	Visual inspection
4	Oil change - Pump mechanism	3 months	Scheduled / visual inspection monitor oil level through sight glass fitted in pump
5	Oil change - Gear Box	Per manufacturer's recommendation	Scheduled / visual inspection per manufacturer's recommendation
6	Rod seals & Wiper seals	Once in 2 years / As needed	Scheduled / leakage / any failure
7	Rotary shaft seals	Once in 3 years / As needed	Scheduled / leakage from coupling housing
8	Bolt torque checks of outer chambers	3 months / As needed	Scheduled / visual inspection

COGNITO EODD Pumps are factory filled with long-life Synthetic lubricant, ISO VG 320 Synthetic. There is need for periodical lubricant change according to loading condition.

COGNITO PUMP LUBRICATION CHANGE FREQUENCY		
Loading Details	*Running Hours	Discoloration Code
High Load & High Speed Pressure : =>4.5bar, RPM => 80RPM	1000	
Medium Load & Medium Speed Pressure: 3-4bar, RPM: 60 - 80 RPM	2500	
Low Load & Low to Med Speed Pressure : <3bar, RPM : 50 - 80	3500	

* Lubrication change frequency depending on loading condition, which ever comes earlier either number of hours or lubricant is turning blackish color spectrum after 6.0 according to ASTM D1500 COLOR SCALE

Oil Replacement Procedure:

1. Unscrew the top Oil fill plug to avoid vacuuming during drain
2. Now open the cover plate and clean it thoroughly
3. Assemble the cover plate applying the grease on the gasket area
4. Close the drain plug and refill the oil with recommended oil grade & quantity
5. Do not mix different grades of oil
6. Do not exceed the recommended maximum level

Recommended Oil Level & Oil Grade:

COGNITO Pump Size (Metallic & Non Metallic)	Oil Qty. (Ltr.)	Oil Grade
4" Metallic & 3" Non Metallic	2.6	ISO-VG 320 Synthetic
3" Metallic & 2" Non Metallic	1.8	
2" Metallic & 1.5" Non Metallic	1.3	

Dusting of the Pump Under Explosive Dust Environment:

1. Dust Layers should not form on the outer surfaces or inner parts of the pump
2. Dusting or Cleaning of the pump's outer surfaces must be done on regular basis or as per local Plant guidelines.
3. Dust should not accumulate or trap between moving parts insider the pump, as O-rings & seal rings are protecting against the entry. Clean the dust in case if you find traces inside the *Dry Parts

*Dry Parts: Dry parts are those parts which are not coming in process fluid contact.....such as Coupling Housing, Back Chamber, Pump Support Structure.

11.1 Diaphragm Replacement

Step 1 - Isolate the pump from pumping fluid and electrical connection, also have necessary tools and spares in hand.

Step 2 - Unfasten the bolts and pull the wet chamber, this might also be the right time to check O-Rings on suction and discharge flange.

Step 3 - Clean the holes and use the supplied tool "F-KEY" (aluminum only) and turn the diaphragm anticlockwise to unfasten it.

Step 4 - Carefully pull the diaphragm assembly out, and keep the rear housing and shaft.

Step 5 - The diaphragm is held between two bolted plates, these bolts are accessible from the rear plate. Clean the chamber completely.

Step 6 - Replace the diaphragm and repeat steps in reverse order to assemble the pump, use star pattern to tighten the diaphragm assembly and wet chamber.

Notes:

1. If the diaphragm is not in the discharge position, take it in discharge position by rotating the motor fan manually.
2. Different Torque values are required for different Diaphragm type. Refer below table for Torque details.

Torque Values for Different Diaphragm

PUMP SIZE	NEOPRENE	SANTOPRENE	SANTOPRENE + PTFE
2"	-	30 Nm / 266 in-lb	30 Nm / 266 in-lb
3"	40 Nm / 354 in-lb	40 Nm / 354 in-lb	40 Nm / 354 in-lb
4"	40 Nm / 354 in-lb	50 Nm / 443 in-lb	50 Nm / 443 in-lb

11.2 Ball & Seat Cage Replacement

Step 1 - Unfasten the upper bolts of the discharge elbow with necessary tools.

Step 2 - Unfasten the lower bolts of the discharge elbow with the necessary tools.

Step 3 - Pull out the discharge elbow, check the valve and seat then replace it.

Step 4 - Unfasten the upper and lower bolts of the suction elbow with the necessary tools.

Step 5 - Pull out the suction elbow, check the valve and seat then replace it.

11.3 Seal Replacement in Center Mechanism

1. To replace the seals, disassemble the wet-chamber, elbow, diaphragm assembly in sequence.
2. Now open seal housing , in which first slot is for Wiper seal & back slot is for rod seal.
3. After replacing it, place this seal sleeve in the back chamber of the pump.
4. Remove the worn out seals and replace with the new one using appropriate tool.
5. Please check the direction of the seals, V section opening should be on the oil side.

11.4 Seal Replacement for Dampener

1. Remove the dust cap and disassemble stopping pin by unscrewing the top bolt.
2. Take out seal housing by unscrewing 6 bolts.
3. Remove the damaged seals using appropriate tool.
4. Place new seals in the proper sequence.
5. There are two parts of seal – O-ring and SUPPORT RING. First Need to position O-ring in grooves and then add SUPPORT ring using appropriate tool.

11.5 Diaphragm Replacement for Dampener

1. Remove dampener from pump. Disassemble dampener by opening bolts of two halves.
2. Remove the dust cap and disassemble the stopping pin by unscrewing the top bolt.
3. Takeout diaphragm assembly. Unscrew the outer plate using grip and holding space provided on shaft.
4. Replace damaged diaphragms. Note that air side should face up.
5. Fix the outer plate with appropriate tool and using specified torque according to size.
6. Reassemble diaphragm rod assembly through the sleeve by applying grease to avoid frictional damage of seals & screw the stopper pin.
7. Assemble the two dampener's halves sandwiching the diaphragm using appropriate torque.

11.6 Disposal after Expiration of the Expected Lifetime

The metallic components like aluminum, stainless steel and carbon steel can be recycled. Plastic parts are not recyclable and must be disposed of as residual waste. The pump must be disposed of properly, according to local regulations. It should be noted that potentially dangerous fluid residues may remain in the pump and can create a hazard to the operator or the environment, therefore the pump must be thoroughly cleaned before disposal.

11.7 Residual Risks

Even with proper application and observance of all points listed in this operating manual, there is still an estimable and unexpected residual risk when using the pumps. It may leak, fail due to wear, application-related causes or system-related circumstances.

11.8 Actions in Emergency

In case of a leakage of an unknown fluid, respiratory protection should be worn and contact with the fluid should be avoided. During firefighting, no special hazards are to be expected from the pump itself. In addition, the currently handled fluid and the corresponding safety data sheet must be considered. When fluid leakage occurs, the power must be turned off, and the pressure released. During the spillage of an aggressive liquid, local and national safety rules must be followed.

11.9 Improving Pump's Longevity

1. Running the pump at the top-rated speed of the motor or more will cause premature wear to the pump's elastomers. We recommend running the pump at 20% less than the rated frequency (50 or 60 Hz) when using a VFD.
2. Post Shutdown, the particulate matter in pumping media may get deposited inside the pump chamber. Hence the pump should be emptied off any remaining media. Failure to do so, may rupture the diaphragm and other wearable part after consecutive start-up.
3. While operating the pump, do not exceed nominal working temperatures stated by the gearmotor manufacturer.
4. Maintain proper lubrication at all times.

NOTICE
Follow the instruction, prior starting the equipment

- Check the oil level
- Clean the vent filter
- Open Inlet & outlet valves connected
- Follow the safety protocol's

NOTICE
CLEAN THE MACHINE !

- Machine may JAM or contaminate the process upon subsequent use.

12.1 Certification Standards & Markings

ATEX Directive	2014/34/EU	EN ISO 80079-36:2016 EN ISO 80079-37:2016 EN ISO 60079-0:2018	
----------------	------------	---	---

Hazardous location Markings:

The non-electrical Ex h protection type used for the pump system is constructional safety type ‘c’.

ATEX Marking	 II 2 G D	Ex h ia IIC T6-T3 Gb (Pump with sensor) Ex h IIC T6-T3 Gb (Pump without sensor) Ex h ia IIIC T85oC-T150oC Db (Pump with sensor) Ex h IIIC T85oC-T150oC Db (Pump without sensor)	DNV 23 ATEX 33382X
IECEX Marking		Ex h ia IIC T6-T3 Gb (Pump with sensor) Ex h IIC T6-T3 Gb (Pump without sensor) Ex h ia IIIC T85oC-T150oC Db (Pump with sensor) Ex h IIIC T85oC-T150oC Db (Pump without sensor)	IECEX DNV 23.0077X
UKCA Marking	 II 2 G D	Ex h ia IIC T6-T3 Gb (Pump with sensor) Ex h IIC T6-T3 Gb (Pump without sensor) Ex h ia IIIC T85oC-T150oC Db (Pump with sensor) Ex h IIIC T85oC-T150oC Db (Pump without sensor)	DNV 24 UKEX 33383X

12.2 Specific Condition of Use

1. Prevent electrostatic charges in potentially explosive areas – do not polish/rub nonconductive surfaces with a dry cloth. Warning – Potential Electrostatic charging hazard- see instructions.
2. Avoid direct impact or friction in the equipment parts containing light metals to eliminate thermite sparks.
3. All gaskets, O-rings and seals used for the EODD pumps shall have the continuous operating temperature at least 20K higher than the identified maximum service temperature of the pump.
4. When EODD pump considered as pump only it must be used with Ex Certified dampener to reduce the pulsation and vibration during the pump operation thus ensuring continuous and precise non pulsed flow rate.
5. When EODD pump considered as pump only it must be connected with the Ex certified leakage detection sensor for any leakage detection during intended use of the pump.
6. Instruction manual must be followed during installing, operating, and maintaining the pump unit.
7. Equipment temperature class depends upon the various ambient temperature specified in this certificate.

Cognito warrants that its products will be free from defects in material and workmanship for a period of 12 months following date of purchase from Cognito. Cognito products which fail within the warranty period due to defects in material or workmanship will be repaired or replaced at Cognito's option.

Parts subject to wear or misuse, such as Diaphragm, check balls, valve seats, stopper cage, oil seals and other parts showing signs of misuse are not covered by this limited warranty. Also, equipment, parts and accessories not manufactured by Cognito but furnished with Cognito products are not covered by this limited warranty and purchaser must look to the original manufacturer's warranty, if any. This limited warranty is void if the Cognito product has been altered or repaired without the consent of Cognito.

All implied warranties, including any implied warranty of merchantability or fitness for a particular purpose, are expressly negated to the extent permitted by law and shall in no event extend beyond the expressed warranty period. Cognito disclaims any liability for consequential damages due to breach of any written or implied warranty on Cognito products.

Information reacquired while you contact factory.

Before you contact the factory, note the model number and serial number of your pump. The serial number directs us to a file containing all information on material specification and test data applying to your specific pump. When ordering parts, Cognito Service Manual or Instruction Book should be consulted for the proper Part Numbers.

ALWAYS INCLUDE THE MODEL NUMBER AND SERIAL NUMBER WHEN ORDERING SPARE PARTS.
